

John Denver Macaraig

Computer Science Graduate · Web Developer / QA / IT Support

09564869986
johndenver9900@gmail.com
Carmona, Cavite

PROFILE

Computer Science Graduate at Cavite State University with hands-on experience in web development, database management, and quality assurance. Proven technical foundation across frontend (HTML, CSS, JavaScript, React) and backend (Node.js, Python) technologies. Brings production discipline from semiconductor manufacturing background—strong attention to detail, systematic problem-solving, and ability to work in precision-driven environments. Fast learner who quickly masters new tools and methodologies.

SKILLS

Languages	HTML	CSS	JavaScript	Python	Java
Frameworks	React	Node.js	Vite	Electron	
Databases	MySQL	MongoDB			
Tools & Design	Git	Photoshop	UI/UX Design	MS Office	Computer Networking
Soft Skills	Fast Learner	Adaptability	Attention to Detail	Work Ethic	

EDUCATION

BS in Computer Science	2021 – 2026
Cavite State University – Carmona Campus · Carmona, Cavite	
Senior High School	2018 – 2020
Philippine Technological Institute of Science, Arts, and Trade · GMA, Cavite	
Junior High School	2016 – 2018
Bulihan National High School · Silang, Cavite	

WORK EXPERIENCE

Semiconductor Change Capillary Operator / Semi Tech Specialist	Apr 2021 – Sep 2022
Amkor Technology P3–P4 · Carmona, Cavite	
- Operated precision semiconductor equipment while maintaining strict quality control standards and meticulous documentation - Identified and resolved technical issues through systematic troubleshooting—translating complex equipment problems into step-by-step solutions - Performed quality assurance inspections on production processes, catching defects and implementing preventative measures - Worked in high-pressure manufacturing environment requiring accuracy, logical thinking, and rapid problem-solving under tight deadlines	

NOTABLE PROJECTS

Jail Information and Visitation Management System (Full-Stack Application)
React 19 Node.js Express SQLite QR Code Integration
Engineered comprehensive full-stack web application for managing jail visitation records, ID creation, and PDL (Persons Deprived of Liberty) information

- Built responsive React frontend with client-side routing, real-time data binding, and interactive QR code generation/scanning functionality
- Developed RESTful API backend using Express.js with JWT authentication, bcrypt password hashing, and secure user session management
- Implemented SQLite database with optimized schema for visitor tracking, check-in/check-out monitoring, and comprehensive reporting
- Integrated Excel.js for bulk import/export operations, enabling seamless data management for production environments
- Designed and deployed complete application with full user authentication system and role-based access controls

Developed with AI-assisted development tools and practices, demonstrating proficiency in modern development workflows and production-ready architecture
